Speech Ease

Cued Articulation

What Is Cued Articulation?

- Cued articulation is a set of hand cues that help children to learn individual speech sounds.

How Can Cued Articulation Support Speech Development?

- Each hand movement represents an individual speech sound.
- This cue gives the child clues for how and where the speech sound is produced.
- This helps children learn how to make the sounds with their mouth and can help them hear the difference between each sound.
